

Unique Family Stories

Lily

Lily's geneticist told me her karyotype but couldn't explain anything about it. It was like seeing the cover of a book, reading the title and wanting to read the book but finding all the pages in the book were blank. After almost 5 years I wanted a name for what was wrong with her. I wanted other people to relate to what she had. Instead I realized that she is a mystery. Lily is unique. I also found *Unique* and although no-one has exactly what Lily has, I found people I could relate to.
